

# YourPOCKET

CLEVER WAY

## Textile Mask YourPOCKET with Nanofilter

Czech producer of N4H nanotechnologies, in cooperation with a Czech specialist in professional clothing Novitex Fashion is proud to offer you a unique solution for protection of nose and mouth against droplet infection. YourPOCKET together with YourFILTER nanofilter combines the advantages of both available solutions: the textile mask is comfortable to wear and the nanofilter provides on average over 98.68 % protection against the penetration of unwanted microparticles - viruses, bacteria, mites, mold, smog and airborne dirt.

## Economically and Environmentally Friendly Solution

The protective part of YourPOCKET mask, as the name suggests, consists of a textile pocket into which our nanofilter - YourFILTER - is inserted. Depending on the environment in which the mask is used, the filter must be changed after 2-6 hours. YourPOCKET is made of cotton, the layer adjacent to the face is made of cotton fabric with a special antibacterial and antimold treatment used in healthcare, maximizing the level of protection of the respiratory tract of the user. We are ready to supply masks in printed patterns such as children's or with corporate logos and graphics. Masks can be washed repeatedly at 60 - 90 °. Their wear corresponds to the wear of ordinary textiles. They are easy-care and easy-to-wear, attachable by laces, to be tied just once either on the head or neck. The consumption of disposable masks is incomparable and at the same time represents a considerable environmental burden. Conventional textile masks can be used repeatedly, but do not provide such a degree of protection. YourPOCKET mask combines the advantages of both solutions and eliminates their pitfalls.

## Why YourPOCKET?

We have been operating in the nanotechnology segment for more than six years and in professional clothing segment for more than 25 years. The declared effectiveness of „miracle“ solutions usually ends in the first laboratory or garbage bin.

However, we guarantee the efficiency of our YourFILTER nanofilters in every single batch. The average efficiency measured in April 2020 is 98.69%. The filtration efficiency in the range of 97.53 - 99.85% is our standard. YourPOCKET together with YourFILTER ensures maximum available protection.
